ATA Chapter: 25-26-00 Curtains and Partitions

Windscreen - B737 Classic / B737 NG / B767/ A 320 / A330/340

Windscreens designed by AMES Part21J Design Organisation and produced by AMES PLS Part21G Production Organisation ensure highest quality and customization to all your requirements.

The AMES designed Windscreens are seat track mounted. The upper attachments include a unique attachment system allowing under-bin installation and the removal of the windscreen within minutes. Difficult loading operations which require removal of the windscreens can be accomplished within the regular aircraft turnaround time.

The metallic honeycomb design guarantees the best weight / stiffness / reliability ratio on the market. AMES windscreens include a high structural reserve factor for additional installations like literature pockets, baby bassinets, magazine covers, IFE components, cutouts, placards etc. Installations can be accomplished with standard tools, without the need for time consuming installation of potted inserts.

The metallic honeycomb panel is covered with a decorative laminate or paint as defined by customer. AMES offers a wide range of standard decors available. For customized decors AMES will provide the required burn test qualification using approved sources within its EASA approved Part 21J design organisation.

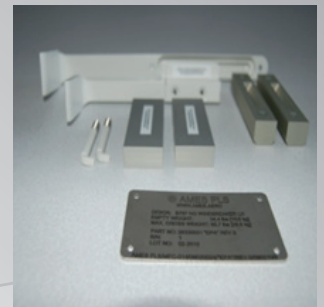

The edges of the AMES windscreens are build by a one piece thermo formed aluminum profile to provide a first class appearance.

Standard Installation Kit

The standard installation kit consists of a LH and RH panel including the aircraft installation mountings. The kit is available with an optional observer window.

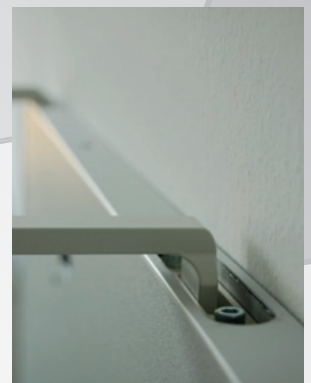

*A320 Windscreen LH
