

Welcome to the 32<sup>st</sup> edition of 'AMES High', which aims to keep customers and suppliers informed about major changes and developments at AMES in the Design, Production and CAMO fields.

## New Products

The new Movable Class Divider Integrates perfectly into the new B737 „MAX“ with standard Sky Interior Bins. With a total kit weight of only around 12kg it gives maximum operational flexibility - installation in the constant cabin section, it allows full usage of OHSC due to retracting bin shades including options for customizing the bin shades in size, geometry and branding. The MCD Assembly includes self-illuminating EXIT signs & Curtain Rails and is available as complete installation kit including curtain kit (if required).

## New Services of our AMES One Stop Shop

We are constantly working on the development of our true one stop shop concept and so we have introduced additional services for our airline and leasing customers. We now offer sourcing of OEM parts and provide suitable kit-supply options together with our own cabin parts. In addition, we offer various onsite support solutions for engineering and logistics. With these additional services we are able to cover the whole supply chain from planning, selecting, sourcing, kitting, packing, delivering and checking/receiving the parts onsite, including full engineering support for installation and troubleshooting.

We are very proud to offer now Part 145 repairs for all cabin products additionally to our existing AMES parts portfolio. We are now certified to perform those repairs for all cabin parts including seats in our Part 145 facility in Peggau/ Austria, but also in any other maintenance facility as well as onboard an aircraft and release those parts with EASA Form1.

## AMES Training

Last month AMES CaT organized a very specialized 2 days Part 21 DOA basic training in our offices at Dublin Airport. This training was performed in cooperation with an Instructor from the Austrian CAA together with an experienced Certification Verification Engineer of the AMES DOA. Due to our cooperation with Austro Control International the AMES Consulting and Training company can offer individual and specialized trainings covering the regulatory requirements (rules and regulations) as well as practical examples & trainings (procedures and implementation) in the CAMO, Design and the Production field. Individual trainings can be arranged at any suitable location worldwide.
