

Newsletter No 10, Mai 2012

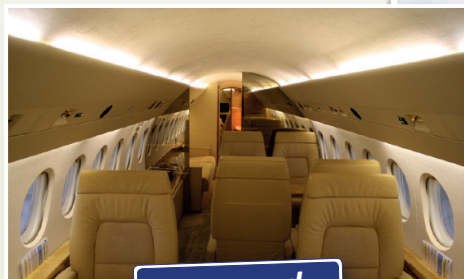

Welcome,

to the 10th edition of 'AMES High', which aims to keep customers and suppliers informed about major changes and developments at AMES in the Design, Production and CAMO fields.

As one of the first EASA STC holders, AMES proudly announces the successful finalization of the integration of the brand new IMS Rave® IFE system into airberlin's A330-200 fleet. The challenging project also included the complete cabin upgrade, installation of new ZIM lightweight Economy Class seats and total refurbished Business Class seats. AMES and our suppliers managed to support the tough time schedule and highest quality requirements and are delighted together with all future airberlin passengers flying this amazing new In-Flight experience!

A second highlight of 2011 was a complete interior refurbishment of a VIP Falcon 900 aircraft for TAG Aviation. Thereby also the complete cabin lighting system was upgraded to LED lights and the general cabin appearance was significantly changed to a modern style as shown below.

Our new head office building is progressing as planned, we are now starting with the interior work, in addition we are increasing our qualified workforce in our Part 21 Design and Production Organisation.
